

22. Considerando-se um cubo cuja medida de cada aresta é igual a 1m, pode-se afirmar corretamente que a medida do volume do poliedro convexo cujos vértices são os centros das faces desse cubo é

- A) $\frac{2}{3} \text{ m}^3$.
- B) $\frac{2}{7} \text{ m}^3$.
- C) $\frac{1}{6} \text{ m}^3$.
- D) $\frac{4}{7} \text{ m}^3$.

Considere as figuras abaixo:

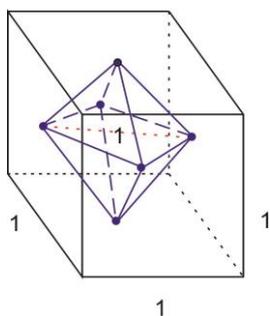

Figura 1

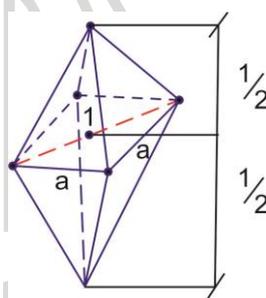

Figura 2

A diagonal do quadrado (Figura 1) liga dois centros de faces opostas, tendo a mesma medida da aresta do cubo.

$$\text{I) } a^2 + a^2 = (1\text{m})^2$$

$$2a^2 = 1\text{m}^2$$

$$a^2 = \frac{1}{2} \text{m}^2$$

$$\begin{aligned} \text{II) } V_{\text{octaedro}} &= 2 \cdot V_{\text{pirâmide}} \\ &= 2 \cdot \frac{A_{\text{base}} \cdot h}{3} \\ &= 2 \cdot \frac{1\text{m}^2 \cdot \frac{1\text{m}}{2}}{3} \\ &= \frac{1}{3} \text{m}^3 \\ &= \frac{1}{2} \cdot \frac{1}{3} \text{m}^3 \\ &= \frac{1}{6} \text{m}^3 \end{aligned}$$
