

**83.** What has been registered by satellites this year reveals that, since they started recording images of these fires in the region, they have become

- A) less harmful than the Amazon fires.
- B) more concentrated in certain precious areas.
- C) the worst fires ever seen in the Pantanal.
- D) scattered in areas with a smaller presence of animals.

Assunto: Interpretação textual

O 2º parágrafo inicia com o trecho “The unprecedented fires in the wetland”, no qual se evidencia que nunca houve queimadas como as que ocorreram esse ano, já que elas são sem precedentes.

Item: C
